

# Connecting to the CannaCoin Network

1. Download wallet from CannaCoin.tech  
<http://www.cannacoin.tech/wallet>
2. Save file to desktop
3. Extract wallet with 7zip: <http://www.7-zip.org>
4. Open cannacoin-qt.exe
5. Connect to the network nodes:

- a. Click Help > Debug Window
- b. Click the Console tab
- c. In the text box type *addnode <ip address> add*  
The nodes used to connect to the network can be found here under this node list: <https://chainz.cryptoid.info/ccn/#!network>
- d. Current example of node list as of 1/4/2018  
*addnode 107.5.135.254 add* (hit enter)  
*addnode 108.170.1.134 add*  
*addnode 144.76.104.229 add*  
*addnode 163.172.42.67 add*  
*addnode 174.46.244.135 add*

You only need to add a few nodes to connect to the CannaCoin network. You can now exit the debug window and the wallet will connect to the network and download the blockchain. Welcome to the community!

\*Note: Webroot antivirus will flag the wallet as a virus. This is a false positive. There are no issues using Bitdefender, Kaspersky, Windows Defender, or Malwarebytes.
